

REMARKS

In response to the Official Action of August 25, 2003, the applicants provisionally elect the invention of Group V drawn to an apparatus for controlling biological systems with a device for generating scale of electromagnetic fields. Applicant's agree that Group V includes Claims 14, 15 and 17-28. Applicants believe that Claims 37 and 39 are also properly included in this group even though they recite the invention as a method. To the extent that the Examiner considers Claims 37 and 39 to be excluded from this group, the Applicant's respectfully traverse the grouping and request reconsideration.

Applicants have withdrawn all claims except those directed to Group V. Applicants have amended the claims of the present application that have not been withdrawn to eliminate any improper multiple dependency. The claims now define the applicants' invention over the prior art of record and allowance of this application is appropriate.

Respectfully submitted,

A. James Richardson
Reg. No. 26,983
